

PURPOSE:

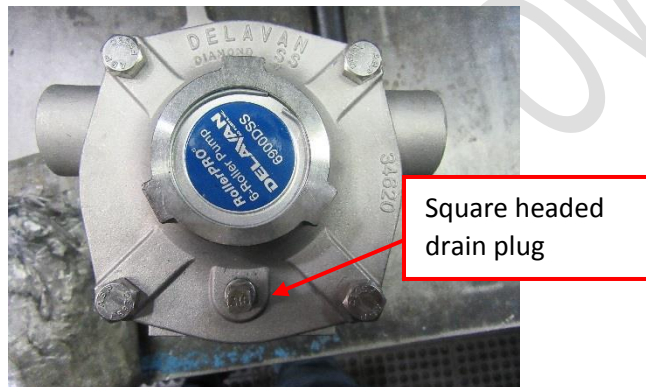

The purpose of this external support resource is to aid in explaining how to clean a roller pump effectively.

TOOLS REQUIRED:

- 5/16" 12-point socket, or wrench
- OR Crescent wrench

PROCEDURE:

1. Locate the square-headed drain plug that is threaded into the end plate

- a. Remove this plug using your selected tool.

2. Allow all fluid in the pump to drain.
3. Rinse pump with water
 - a. Add water into both ports while spinning the shaft and moving the pump making sure the water is rinsing all interior surfaces
4. Drain the pump once again

5. Replace the drain plug back into the end plate

6. Spray a light oil into the ports of the pump and spin the shaft to coat as much of the inside surfaces of the pump as possible to aid in avoiding corrosion.
