## DELAN

2200 Series
1.2 GPM Demand Pump

## Installation <br> Operation • Repair • Parts

## Specifications

## Motor:

Type: 12 VDC permanent Magnet totally enclosed Type: non-ventilated.
eads: 12 AWG with 2 -pin molded connector
Duty Cycle: See Heat Rise Graph
Temperature Limits: Motor is not equipped with therma protection. For user safety, optimal performance, and exceed $180^{\circ} \mathrm{F}\left(66^{\circ} \mathrm{C}\right)$.

## Pump

yype: 2 Chamber positive displacement demand
diaphragm pump, self priming, capable of being run dry.
Liquid Temperature: $140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$ Max
Priming Capabilities: 4 feet ( 2.5 m )
Max Pressure: 50 PS

## Materials of Construction

## Housing: Polypropylene

Housing: Polypropylene
Valves: Viton
Fasteners:
Weight: 3 bs

## Available Models

2200-101 2200-201
$2200-201-$ CE 2200-201-CE

1.2 GPM, DEMAND, 2 PIN CONNECTOR, 12 VDC , 4OPS
1.2 GPM, DEMAND, $12 \mathrm{VDC}, 2$ PIN CONNECTOR, 4OPSI, RETAIL BOX
1.2 GPM, W/SWITCH, 12VDC, 2 PIN CONNECTOR, 40PSI

My Pump will not start;
-Check all electrical connections, fuses, brears and wires powering the pump If you are unsure about how to check components contact a qualifid technician.
.

- Rectifier or Motor for open or ground circut.

Pump will not Prime; (no discharge with motor running)
-Most common reason for pump not priming is an air leak in your system. From the suction side of your pump ensure that all o-rings are in place and all lamp are air tight. Ensure there are no holes in your hoses.
xamine all filters and strainers. Replace any that are clogged with debris.
-Increase suction hose size to slightly larger than the outlet or discharge side of pump.

- Check Pump Housing for cracks.

Pump will not shut off;
Most common reason is air trapped in the outlet or discharge side or head of pump head. Disconnect hoses, drain lines and reconnect

- Check for loose drive assembly or pese and inlet/outlet valves.

Pheck for loose drive assembly or pump head screw.
Pump leaks from pump head or switch;

- Check for loose screws or bolts around pressure switch and pump head.

Pump is Cycling; (Rapidly turning on and o

- Pump cycling is always caused by more flow than the application allows. To fix;
- Add a bypass valve or 'return to tank' valve into your spraying system

## Installation

 returning to store. We are happy to help with any troubleshooting or product issues
## Pressure Sensing Demand Switch

The PowerFLO Series Demand Pumps are controlled by a built-in pressure sensing demand switch. When a faucet or valve is opened down steam of the pump, line pressure drops thus starting the pump automatically. Conversely, when the valve shuts, the line pressure increases turning the pump off automatically. The pressure switch actuates in response to the pumps outlet pressure at a predetermined and preset pressure. The pump label indicates the predetermined OFF pressure. The OFF pressure is accurately set at the factory and the ON pressure is within an allowable range below that value. In response to the characteristics of the system in which the pump is installed, the flexibility and length of the tubing, the faucet or valves and the duration adjustments of pressure switch can cause overload and may damage your pump.

## Installation

The pump should be mounted in a dry place away from any sources of heat. If an enclosure is used, special instructions for cooling the motor may be necessary. Consult the factory

## Plumbing:

Use suction hose to inlet of pump. Use flexible tubing with proper pressure rating.
Pump will prime only if all pressure is relieved from the outlet port.
It is recommended that debris-free water be pumped or an in-line sediment filter ( 50 mesh) be installed at the inlet side to keep foreign debris out of the
The pump should always be mounted prior to any components which could introduce particles into the water, thus preventing them from entering the pump chambers and causing clogging.

## Electrical:

Ensure Power supply used is adequate for the application
Pump ratings are based on alternator charged battery which supplies 13.7 volts.
Precautions
Do not operate pump in an explosive environment. Arcing from the motor brushes, switch or excessive heat from an improperly cycled motor may cause an explosion.
Do not place the pump motor near low temperature plastics or combustible material. The surface temperature of the motor may exceed $250^{\circ} \mathrm{F}\left(120^{\circ} \mathrm{C}\right)$. Do not pump gasoline or other flammable liquids. Pump head materials are designed for use with water only
To prevent electrical shock, disconnect power before initiating any work. In the case of pump failure, the motor housing and/or pump fluid may carry high voltage to components normally considered safe. Therefore, always consider electrical shock hazard when working with and handling electrical equipment. If uncertain, consult an Electrician. Electrical wiring should only be done by a qualified electrician per local and state electrical codes
Operation:

1. Turn off water supply.
2. Cut flexible tubing in sufficient length to avoid any stress on the tubing where it connects to the pump or the fitting on any accessory.
3. Insert tubing into pump ports. If fittings are John Guest type, be sure tubing is inserted past the resistance point until it bottoms out against the port stop. If ction is tight. Then use a wrench to tighen the nut $1 / 2$ turn clockwise or follow the wrench tightening instructions provided nut until the manufacturer.
4. The pump is now ready for operation. Turn on water supply valve to allow water to flow to the pump.

If the power source is a transformer, plug the appropriate supplied/approved transformer into the receptacle and connect the pump to the transformer. If the power source is not a transformer, connect the pump to the appropriate power source. Open the discharge or dispensing valve. Allow water to and line voltage. Check for fitting leaks.
5. If compression fittings with threaded nuts are used, observe any leaks after pump has run for approximately 15 minutes. Further tighten compression nuts approximately $1 / 8$ to $1 / 4$ of a turn on all fittings in the system. Wait 15 minutes and repeat the leak check. Note: Further adjustments should not be necessary although it may take several days of operation before all the air has been purged and the system is stabilized.

Service and Maintenance:
Once per year owners should check against operating standards.

## Winterizing and Pump Storage

Before winterizing or storing pumps not in use for extended periods, Delavan Fluid Power recommends;

1. Run fresh water through pumps for 90 seconds to flush any residual chemicals from pump head.
2. Pump RV antifreeze through pump for 30 seconds
3. Always store pumps indoors in a clean, dry, and vibration-free environment. Preferably in a cabinet or closed storage area that is free of insects and airborne debris.
4. If in storage for longer than 3 months, turn pump on intermittently for 30 seconds. Periodically turning on pump prevents the grease in bearings from settling on one side and wear.

## Warnings

## Please read and follow operators manual before using and installing Delavan Fluid Power products.

Do not use pump outside the parameters listed on the label. Never use the pump above 100 PSI at anytime.
NEVER pump gasoline or other flammable liquids. Pump head materials are designed for use with water based products only. NEVER use with Petroleum based products.
-Do not use in an explosive environment. Arcing from the motor brushes, switch, or excessive heat from an improperly cycled motor may cause an explosion

- Do not assume fluid compatibility. If the fluid is improperly matched to the pump head, interna damage may occur.
- Always consider electrical shock hazard when working with and handling electrical equipment. If uncertain, consult an Electrician. Electrical wiring should only be done by a qualified electrician per
Local and State Electrical Codes.
- Pump to be run between $32^{\circ} \mathrm{F}\left(0^{\circ} \mathrm{C}\right)$ and $115^{\circ} \mathrm{F}\left(46^{\circ} \mathrm{C}\right)$ environmental conditions. Maximum fluid temperature run through pump is $140^{\circ} \mathrm{F}\left(60^{\circ} \mathrm{C}\right)$. - To prevent electrical shock, disconnect power before initiating any work. In the case of a pump failure, the motor housing and/or pump fluid may carry high voltages to components normally considered safe. Therefore, always consider electrical shock hazard when working with and handling electric equipment. If uncertain consult an electrician. Electrical wiring should only be done by a qualified electrician per local state electrical codes.
Do not locate the pump motor near low temperature plastics or combustible material. The surface temperature of the motor may exceed $250^{\circ} \mathrm{F}$ -The installation of a 50 mesh strainer is recommended to prevent debris or other foreign material from entering the pump and causing pump failure.

Delavan Pumps are designed for intermittent duty, but may run continuously if the motor temperature does not exceed the recommended limit.

Al
Always assess work area for any hazards before using pump. Sheet read

## DELAVAN STANDARD WARRANTY

Delavan AG Pumps warrants its products for a period of two (2) years for consumers and 90 days for commercial users. The warranty period begins on the date of manufacture or the purchase date (with proof of purchase). The warranty period is not extended if Delavan repairs or replaces the equipment

This Delavan AG Pumps warranty will not apply to any subsequent owner or other transferee of the Equipment. Delavan AG Pumps warrants that any new Equipment will be free from defects in workmanship or materials under normal use, maintenance and service (rental use excluded). The Warranty Period is not extended if Delavan AG Pumps repairs or replaces the Equipment.
This Limited Warranty does not apply to equipment that has been altered, changed, repaired or treated since its delivery, used equipment, damaged or depreciation due to normal wear and tear. This limited warranty does not apply to defects or damage due to failure to follow Delavan AG Pump's operator's manual, specifications or other written instructions, improper storage, operation, maintenance, application or installation of parts, defects or damage due to misuse, accident or neglect,"acts of God" or other events beyond Delavan AG Pump's reasonable control. Delavan AG Pump's warranty does not apply when damaged by accessories, attachments, tools or parts that were not manufactured by Delavan AG Pumps. If the returned product is found not to be defective under the conditions of this warranty, a charge will be made for repar of labor and goods returned. Delavan AG Pumps reserves the right to charge $\$ 90 /$ hour labor on non-defective good.

The sole and exclusive obligation of Delavan AG Pumps under this or any implied warranty shall be to replace or, at its option, to repair, withou charge, any product which is determined by Delavan AG Pumps to be defective in workmanship or materials after the product is returned to the Delavan AG Pumps factory, shipping costs prepaid. No credit shall be given for warrantable items,
In no event shall Delavan AG Pumps be liable to any person for indirect or consequential damages or for injury or commercial loss resulting from any use or inability to use any Delavan AG Pumps product.
Delavan AG Pumps expressly negates any other warranty, express or implied, including any warranty of merchantability or fitness for a particula purpose, or arising from any course of dealing or custom or usage of trade.
No person, including any dealer or representative of Delavan AG Pumps, is authorized to make any representation or warranty on behalf of Delavan AG Pumps nadartion to ri conststerthe provisions. obligations of Delavan AG Pumps expressly set forth herein.

Return Policy
For the safety of our employees and handlers, all pumps must be flushed with fresh water for 90 seconds prior to shipping. Delavan AG Pump reserves the right to request ( $M$ )SDS for all chemicals used within. Delavan AG Pumps reserves the right to dispose as scrap any product returned with unknown fluids. Delavan AG Pumps reserves the right to charge returnee for any costs incurred for chemical testing and disposal of unknowns. Please Include complete description of operation problem, such as how pump was used, symptoms of malfunction, etc. to help pinpoint the reason of breakdown.
